

MEMORY SCREENING

A CLOSER LOOK AT MEMORY CHANGES

A **memory screen** is a wellness tool that helps identify possible changes in memory and cognition.

It creates a baseline of where a person is at so that future changes can be monitored.

It's **free** and only takes 10 minutes!

Get immediate results

Keep them for future comparison and/or share them with your physician. At your request, we will fax them to your physician.

Early detection is important

Just as blood pressure, cancer, diabetes or stroke screening contribute to prevention and better treatments, so do memory screens.

Treatment is possible

Some types of dementia are reversible, like those from nutritional and vitamin deficiencies, depression, thyroid issues, medications, stress and more.

Knowledge means more control

Dementias that are not reversible can often be treated with medications that could slow down the process and preserve quality of life for a longer time.

**MEMORY SCREENINGS
WILL BE HELD
KEWASKUM PUBLIC LIBRARY
WEDNESDAY, JUNE 19
1:00-4:00 PM
BY APPOINTMENT ONLY**
